

LANDSCAPE CASE STUDY: PEAR TREE LANE

Pear Tree Lane is a residential housing project requiring both a hard and soft landscape scheme to create a beautiful exterior environment which reflects the interior space of the homes.

The scheme aims to integrate the new housing development with the local environment and protect local species and habitats with the choice of materials and species selection.

Soft landscaping includes birch trees, cherry trees, native hedges and herbaceous planting such as Buddleia and periwinkle to bring colour and attract wildlife.

PROJECT BENEFITS:

- Native species to compliment the local landscape character
- Hard landscape materials selected to create stunning exterior environments
