

Stolwood Architects are registered with the 2030 RIBA Climate Challenge to address the global climate crisis. We aim for net zero whole life carbon emissions to your project. This provides many benefits of health and wellbeing, energy saving and social benefits towards a better and more sustainable future for all. This is achieved by using natural materials, planting, super insulated and energy efficient design. Stolwood Architects have produced a **Voluntary Sustainable Designers Code** of Conduct to inform clients and construction teams to the primary aims of sustainable design. From the code Stolwood Architects will establish and inform you of the most appropriate sustainable design methods for your project.
